From Nest to Flight

As the eaglet grows, it begins to explore its surroundings, venturing out of the nest and onto nearby branches. Its parents continue to provide it with food, but it also starts to learn how to hunt on its own. By the time it is about two months old, the eaglet is fully feathered and ready to take its first flight.

Threats and Conservation

Despite their iconic status, Bald Eagles have faced numerous challenges over the years. Habitat loss, pollution, and hunting have all contributed to declines in their populations.

However, thanks to conservation efforts and increased awareness, Bald Eagle populations have rebounded in recent decades. The species is now considered stable, and its numbers continue to grow. This is a testament to the resilience of these remarkable birds and the importance of protecting their delicate ecosystems.
