

Understanding Parkinsonism: The Clinical Perspective

Parkinsonism is a neurological condition that affects movement, balance, and coordination. It is most commonly caused by Parkinson's disease, but can also be caused by other conditions, such as multiple system atrophy, progressive supranuclear palsy, and corticobasal degeneration.

Parkinsonism is a progressive condition, meaning that it worsens over time. The symptoms of Parkinsonism can vary depending on the underlying cause, but typically include:

Understanding Parkinsonism: The Clinical Perspective
