About the Book

Hydraulic Structures is the definitive guide to the design and construction of hydraulic structures, from dams and reservoirs to irrigation systems and flood control projects. This comprehensive volume provides a thorough understanding of the principles governing the behavior of water and the techniques used to control its flow.

Written by a leading expert in the field, Hydraulic Structures is packed with practical examples and case studies that illustrate the application of these principles in real-world projects. The book is also richly illustrated with photographs, diagrams, and tables that make the complex concepts easy to understand.

Key Features

- Covers the entire range of hydraulic structures, from dams and reservoirs to irrigation systems and flood control projects
- Provides a thorough understanding of the principles governing the behavior of water and the techniques used to control its flow
- Packed with practical examples and case studies that illustrate the application of these principles in real-world projects
- Richly illustrated with photographs, diagrams, and tables that make the complex concepts easy to understand
- Written by a leading expert in the field

Benefits of Reading This Book

- Gain a deep understanding of the principles governing the behavior of water
- Learn the techniques used to control the flow of water

- See how these principles are applied in real-world projects
- Enhance your knowledge of hydraulic structures and their role in water management
- Become a more effective engineer or water resources manager

Who Should Read This Book?

Hydraulic Structures is an essential resource for engineers, water resources managers, and students who are interested in learning about the design and construction of hydraulic structures. It is also a valuable reference for professionals who work with water in any capacity.

About the Author

Bill Plaschke is a leading expert in the field of hydraulic structures. He has over 40 years of experience in the design and construction of hydraulic structures, including dams, reservoirs, irrigation systems, and flood control projects. He is a Fellow of the American Society of Civil Engineers and the recipient of numerous awards for his work in the field.
