

# What If Richard Matheson's "I Am Legend" Became Reality?

Richard Matheson's 1954 novel, "I Am Legend," is a seminal work of science fiction and horror. The story follows Robert Neville, the last living human in a world overrun by vampires. Neville must fight for survival against the relentless creatures of the night, while also grappling with the loneliness and despair of being the sole survivor of humanity.

"I Am Legend" has been adapted into several films, including the classic 1964 film starring Vincent Price and the 2007 film starring Will Smith. The novel has also been the inspiration for numerous other works of fiction, including Stephen King's "The Stand" and George A. Romero's "Night of the Living Dead."

The enduring popularity of "I Am Legend" is due in no small part to its timeless themes of survival, isolation, and the human condition. The novel raises important questions about what it means to be human, and what we are capable of in the face of adversity.

But what if the events of "I Am Legend" were to become reality? What if a virus were to turn the majority of humanity into vampires? How would we survive? What would we become?

These are the questions that this article will explore. We will take a close look at the science of vampirism, and we will examine the social and psychological effects of a vampire apocalypse. We will also offer some tips on how to survive in a world overrun by vampires.

## **The Science of Vampirism**

Vampires are often depicted as creatures of the night, with superhuman strength and speed. They are said to be immortal, and they can only be killed by a stake through the heart, decapitation, or exposure to sunlight.

But what is the science behind vampirism? Is it even possible for a human being to become a vampire?

The answer is: it's complicated. There is no single scientific explanation for vampirism, but there are a number of theories.

One theory is that vampirism is caused by a virus. This virus could be transmitted through a bite or scratch from an infected person. The virus could then mutate the victim's DNA, giving them the characteristics of a vampire.

Another theory is that vampirism is caused by a genetic mutation. This mutation could occur spontaneously, or it could be inherited from a parent who is a vampire.

Whatever the cause, vampirism is a very real possibility. There have been numerous cases of people who have exhibited vampire-like symptoms, such as an aversion to sunlight, a craving for blood, and superhuman strength.

## **The Social and Psychological Effects of a Vampire Apocalypse**

A vampire apocalypse would have a devastating impact on society. The majority of humanity would be turned into vampires, and the few remaining humans would be forced to fight for survival.

The social order would collapse, and law and order would break down. The vampires would be the dominant species, and humans would be their prey.

The psychological effects of a vampire apocalypse would be just as devastating. The constant fear of being attacked would take a toll on the human psyche. People would become paranoid and distrustful, and they would be constantly on edge.

The loneliness and isolation of being one of the few remaining humans would also be unbearable. Many people would succumb to despair and give up on life.

## **How to Survive in a Vampire Apocalypse**

If a vampire apocalypse were to happen, there are a few things you can do to increase your chances of survival.

First, you need to find a safe place to hide. This could be a remote cabin in the woods, a fortified house in the city, or even an underground bunker.

Once you have found a safe place to hide, you need to stock up on supplies. This includes food, water, weapons, and medical supplies.

You also need to be prepared to fight. Vampires are powerful creatures, but they can be killed. The best way to kill a vampire is to stake them through the heart, decapitate them, or expose them to sunlight.

If you are ever attacked by a vampire, don't panic. Stay calm and fight back. You may be able to kill the vampire or at least escape.

A vampire apocalypse is a terrifying possibility, but it is also a possibility that we must be prepared for. If such an event were to happen, it is important to remember that there is hope. There are ways to survive, and there are ways to fight back.

We must never give up hope. We are the last humans on Earth, and we must fight to survive.
